ABOUT ME

About 1 years ago I was interested in Front-End development and I started to study it using FreeCodeCamp, MDN, HTML Academy simulators, webinars and YouTube videos. In September 2020, I decided to take courses at the Beetroot Academy in order to systematize the acquired and gain new knowledge, experience, mentoring and code review. At the moment, I am studying working with Git and going through the basics of JavaScript again in Udemy courses, improving HTML/CSS code and JS skills on Codewars and my pet projects. Also improve my knowledge of english. Soon I plan to start learning JS framework React, Gulp / Webpack task manager. I appreciate the friendly team and responsibility. I can quickly adapt, search information and learn quickly. I get unreal pleasure from WEB developing. Especially when everything works as it should and benefits the user.
